# DESIGN

The design of the AI1's specially crafted lifting arms is unique the world over, and this is due to the use of aluminium profiles.

These profiles are crafted to the millimetre and co-ordinated, to guarantee a long-lasting, accurate operation.

This is what „design follows function“ is all about.

# WEIGHT

Nowadays, aluminium has become a synonym for lightweight construction within the automotive industry.

AMF-Bruns are the first and only lift manufacturer to transfer this idea consistently to their products. Despite its 400 kg working load the AL1 is 25 per cent lighter than the average lift in the market - not one is lighter!

This means an increased working load for your vehicle, and benefits the environment.

# RELIABLY SAFE

Our production principle is simple: one man - one lift!

At the end of the development process the goal was to create the best possible lift - from start to finish and accounted for by one professional, documented by his name.

With construction precision, evocative of a clockmaker, the AL1 is a unique product with outstanding durability.

# AL1

Aluminium: chemical element with the symbol AL.  
The AL1 is the 1st lift in the world which load-bearing parts are made from aluminium.  
Innovative design - unbeatably light: that's the new AL1 by AMF-Bruns.
